

Passenger Seat for HPDE

Posted by BritRacer - 21 Aug 2012 10:20

Hi Guys,

Steve has been very kind and given me a Corbeau Clubman seat to save me buying a seat just for my HPDE. Steve said it was used before by his Dad during HPDE but I was looking over the CCR and wondered if the rules had changed. It implies that the seat must conform to the same rules as the Drivers seat and therefore needs a back brace? Is this right or have I just mis-read this large document.

Thanks in advance.

Jason

Hope to see you all at Infineon!

Oh, almost forgot, pad the rollcage on the passenger side with the high density foam required in the CCR's not the cheap stuff. That WILL be a deal breaker!

A seat back brace doesn't have to bolt to the seat. Mine is a large plate that just sits right behind the seat and I don't see any reason that wouldn't work with the Corbeau. I have a spare brace somewhere but I'm not sure I could come up with it.

Thanks for all the replies.

Thanks for the reminder Ron, I have an order going into summit for some parts so forgot to add this.

Thanks Steve, I had not thought about adding an extra plate to the back brace and the just butting the sit up against it.

Ron, I will be doing a single day of HPDE 1 (they aren't doing HPDEs on sunday for some reason), but as soon as I get into HPDE 2 I would welcome any advice any of you are willing to provide!

Really appreciate the help.

That is the normal way to attach a back brace to a non aluminium seat - the fibreglass/carbon fibre ones shouldn't be drilled.
