

Updated CV Bolt Kit for 944/924

Posted by jaje - 22 Jan 2010 04:47

Came across this on Rennlist. Sounds enticing for adding security to CV bolts and a retainer clip system to reduce need for safety wiring them (like some racers do). Not sure if it's needed at all but sounds like a good idea.

Replaces the cheesehead cv bolts with 12 point socket bolts with special designed retainer / clip system to eliminate need for safety wiring. Also these are reusable (1,100 lbs holding force).
