944-SPEC - 944SPEC - low cost wheel to wheel racing

Generated: 9 September, 2025, 01:08 exhaust?? Posted by cullenwinter - 22 Mar 2008 13:00 Our local muffler guy (and corvette racer) is willing to hook me up with some work at greatly reduced cost, so I am planning to have him remove the cat. Here's my question: How much weight will I lose by replacing the cat with a piece of straight pipe? (I've got to be careful, not a whole lot more can come out of my car) **Thanks** Re:exhaust ??
Posted by SvoChuck - 22 Mar 2008 15:06 you need the cat out . it's the only thing we do to make more power in our cars. add some fuel to make up for the weight. Re:exhaust ??
Posted by dmdirks - 22 Mar 2008 23:30 If I remember correctly the cat weighs around 20lbs, so the net loss is around 17 lbs. Re:exhaust ?? Posted by joepaluch - 22 Mar 2008 23:31 Yep ditch the cat. It can get you 8-10hp. The weight savings can be corrected with a little ballast. I run 30lbs of ballast to make sure I meet weight even with no fuel in the car.

it sounds best with no cat.

Thanks Guys, I would also like to hear the revs a little better (yes I know I could look at the tach once in a while!) Will the cat removal change the sound much?

I was thinking I could put an el cheapo cherry bomb on the car (just to PO the knuckle-draggers) Does the engine require the back pressure that the stock exhaust provides?
