I know some of you that bought the AC delete bracket actually called the company that produces them and had them match their ebay price and ship directly. Any way I could get that contact info and the price?

Much appreciated,

Chris

Ka-pow !! [www.broadfootracing.com/asa\\_forums/sh...t=alternator+bracket](http://www.broadfootracing.com/asa_forums/sh...t=alternator+bracket) found it on page 5 of this thread [www.nasarockymountain.com/nasa\\_forums/sh...t=alternator+bracket](http://www.nasarockymountain.com/nasa_forums/sh...t=alternator+bracket)

My junkyard bracket (thanks to Ken) is really sturdy and working out well. Did you break another turnbuckle ?

Thanks, Cullen

i did, which makes 3 turnbuckles ive broke. I saw dave w's and liked how it moves the alternator out of the way of the hoses and intake, plus lower center of gravity is a +

My junkyard bracket (thanks to Ken) is really sturdy and working out well.

I fabricated a bracket for Michelle's car out of some scrap 3/16 x 1" steel bar stock. Made it exactly like the one in our Tech section, even though I didn't have a Martha Stuart ruler.

Works fine, lasts a long time!!

I use the Porsche factory A/C delete bracket. Works great and I have never had an issue with the turnbuckle in all my years of racing the car.
