Loss of	power in	Right	hand	turns
Posted by Lo	wco17 - 17 Ja	n 2015 17:2	28	

,

First day at the track with a new build car.

Car is hard to start when cold, but starts fine when it has been warmed up. Idle is a little inconsistent. On the track it will lose all power coming out of a sharp right hand turn and partial power in a sweeping right hand turn. It is fine in the straights and in and after left hand turns.

I have replaced both Hall effect sensors, the TPS and the DME with no change.

Does anyone have any ideas? Any help is much appreciated.
